

Brow and Beauty Bar - Permanent Makeup

Eyebrow Before Care

- Do not work out the day of the procedure.
- Do not tan or have sunburned face.
- Do not take Aspirin, Niacin, Vitamin E or IBUprofen 24 hours before procedure.
- No alcohol or caffeine on the day of the procedure.
- No waxing or tinting 3 days before the procedure.
- Please note that you will be more sensitive during your menstrual cycle.

Eyebrow Aftercare

- NO water, cleansers, creams, makeup or any other products on treated area for 10 days.
- 4-5 hours after the procedure, clean the area with sterile water and a cotton pad, gauze or q-tip and allow to air dry.
- DO NOT rub, pick or scratch the treated area. Let any scabbing or dry skin naturally exfoliate off. Picking can cause scarring.
- Avoid direct sun exposure or tanning for 3-4 weeks after procedure.
- Avoid heavy sweating for the first 10 days.
- NO facials, botox, chemical treatments and microdermabrasion for 4 weeks.
- Avoid sleeping on your face for the first 10 days.

Please note: Eyebrows will appear darker and bolder due to natural scabbing and healing for the first 10 days. This is very common for all permanent cosmetic procedures.

Permanent makeup is NOT recommended for any clients who are or have:

- Pregnant or nursing
- Diabetic
- Chemotherapy (consult your doctor)
- Viral infections and/or diseases
- Epilepsy
- Pacemaker or major heart problems
- Organ transplant
- Skin irritations or Psoriasis near the treated area (rashes, sunburn, acne, etc.)
- Sick (cold, flu, etc.)
- Botox in the past 2 months
- Accutane in the past year

Brow and Beauty Bar - Permanent Makeup

Long-term care

- Use a good sunscreen on your eyebrows if you plan to be in the sun for prolonged periods of time. Sun exposure will fade your permanent cosmetics
- If you are planning a chemical peel, laser procedure or an MRI scan, please inform the technician of your permanent cosmetics
- The use of Retin--A / Tretinoin or any other rapid skin exfoliation products used regularly on the forehead area will cause the permanent makeup to the eyebrow area to fade prematurely.
- The use of chemical peels and acid peels regularly on the forehead region can also cause eyebrow tattoos to fade prematurely.

* A touch up is recommended 1-3 months after the initial procedure due to many factors that can affect the pigment retention. The price for this touch up is \$150 and is optional.

Additional Information

Antacids, thyroid and anxiety medications have been reported as interfering with permanent makeup either by affecting retention or shifting the pigment to an undesirable tone. Remember, everything we eat and drink have their own chemical structure and the electron ends that are unattached or free, may get attached to others compounds inside the body forming a new molecule that may show a different color spectrum. With that info, an educated client may have better expectation and know that she / he may need more frequent adjustments than others.
